

# COBOL-IT certified with IBM TXSeries on Linux x86 and Microsoft Windows

**The latest version of IBM TXSeries for Multiplatforms integrates support for COBOL-IT on Linux x86 and Microsoft Windows platforms.**

IBM TXSeries for Multiplatforms is a CICS online transaction management environment distributed for mission-critical applications integrating applications written in multiple programming languages. The latest release of IBM TXSeries for Multiplatforms connects both data and applications in Enterprise-Class distributed processing environments and is used to deploy CICS applications written in COBOL, C, C++, Java and PL/1.

COBOL-IT is now certified with V8.2 of TXSeries for Multiplatforms, which offers increased platform coverage, including both the Linux x86 and Microsoft Windows platforms.

This certification allows COBOL-IT to respond to the strong demand for the latest version of TXSeries for Multiplatforms on Linux x86 and Microsoft Windows.

In addition, it confirms IBM's commitment to continue strengthening their strategic partnership with COBOL-IT.

## About COBOL-IT

COBOL-IT is the first company to offer a high quality, professional COBOL compiler to large enterprises seeking to migrate, deploy and maintain their COBOL applications at the lowest cost and lowest risk. Founded in 2008, COBOL-IT has rapidly assumed a position of leadership in the global COBOL community, migrating hundreds of customers, with hundreds of thousands of users and hundreds of millions of lines of COBOL code.

With a robust product suite and a proven migration process, the company provides solutions that allow their clients to preserve the functionality of their strategic COBOL applications, with superior performance, agility and a significant reduction in costs. Technical Hubs located around the world allow COBOL-IT to guarantee that all of our clients have access to expert and responsive technical support. Partnership agreements between COBOL-IT and the leading providers of technical services and software solutions in Open Systems ensure that moving to COBOL-IT can be accomplished at low cost and low risk everywhere in the world.
